DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. The request filed on 1/19/2007 for a Continued Examination (RCE) is accepted and a RCE has been established. An action on the RCE follows.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3682

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Hanatani (USP-2002/0128112).

Re claim 1: Hanatani discloses a bicycle shift control device comprising a base member (50) for attachment to the bicycle, an operating member (20,30) rotatably supported relative to the base member for rotating in first and second directions around an operating member axis ([0035]); a transmission control member (60) rotatably mounted relative to the base member to directly pull and release ([0043], [0049], [0059]) a transmission control element (200), wherein the transmission control member (60) rotates around a transmission control member axis that is substantially parallel to the operating member axis in response to rotation of the operating member (Fig. 2); an intermediate member (44) that moves in a direction of an intermediate member axis in response to rotation of the operating member (20,30), wherein the intermediate member includes an intermediate member detent (140,146) for maintaining a rotational position of the operating member (20,30) and the transmission control member (60).

Allowable Subject Matter

5. Claims 2-6 and 11-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
